|---------------|-----------------------------------------------------------------------------------------|
| Date          | 29/09/2026                                                                              |
| Team ID       | SWTID- 2026-6146                                                                        |
| Project Name  | Streamlining IT Procurement:<br>Automating Standard Laptop Orders<br>with Flow Designer |
| Maximum Marks | 4 Marks                                                                                 |

#### **Solution Architecture:**

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

#### **Example - Solution Architecture Diagram:**

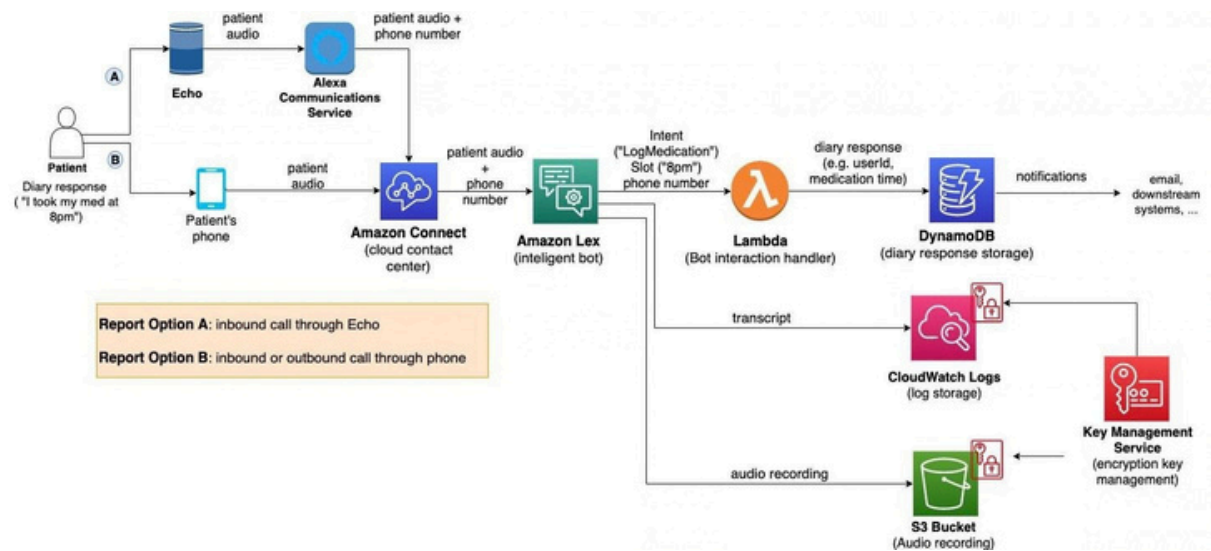

Figure 1: Architecture and data flow of the voice patient diary sample application
